Thank you. I'll see what I can track down here.

Subject: Getting back to you on VOC data question

Hi, Julie –

A couple of days ago you wanted to know if we had a larger list of VOCs than those that were summarized in the DEQ 2015 air data summary document that I gave you a link to. I did get a call back from Anthony Barnack, our DEQ lab liaison.

I have cc'd Anthony on this so that he can correct me if needed. We have given all VOC data that EPA requests to them, and it should be available in that database. Anthony told me that the two EPA folks who are most experienced at mining out data that are actually usable from the very large and unwieldy database are Chris Hall and Keith Rose. If you need VOC data other than what EPA requests from DEQ, then Anthony can send that along....but it won't be easy to pull out what you need, apparently. He told me we also have data associated with odors (but I am not sure exactly what this includes). Anthony also pointed out that we have easily-accessible air data from 2013 and 2014...but if we need to go further back in time, it will be more difficult to find/make available.

Didn't mean this to sound so unhelpful, but I am parroting what Anthony told me, and may have focused too much on the negative aspects.

Let me know if you cannot get what you need from the EPA database.
